Evolution: A Spiritual Science Approach

Raul Valverde*

Concordia University, Canada

Abstract

Over the years, many religions have expressed their beliefs of the creation of the world by God, but they have been ridiculed by evolutionist that claim that evolution is responsible of the creation of the world and all the living creatures on it. What evolutionist call evolution is nothing more than God. God is self-existent and an evolving being and as he evolves, all his creation evolves. This is possible because he lives in all the living creatures of the world including us. Death is part of your own evolution and part of God's plan, without death, the world we live in would be static and things would never change. Creationist are ridiculed because they believe that God created the world in seven days, evolutionist would argue that evidence shows that it took millions of years to create the earth and universe but what evolutionist fail to realize, is that time is just an illusion and only exists in our brains and it does not exist in the mind of God. The time it took for the creation of our world was just an instant in the eternity of the Universe. Evolution is the process that God has created for us to reach him, evolution and creationism is part of the same thing, only evolved beings will be able to create. Creationism is nothing more than the goal of evolution, our destiny as human beings is to be co-creators of this universe that we live in, but it is only with our own evolution that we will be able to achieve this.

Keywords: Evolution, consciousness, quantum physics, scientific God, spiritual science.

1. Introduction

Over the years, many religions have expressed their beliefs of the creation of the world by the living father, but they have been ridiculed by evolutionist that claim that evolution is responsible of the creation of the world and all the living creatures on it (Wolf & Mellett 1985).

The reality is that both visions are right. What evolutionist call evolution is nothing more than the living father himself. The living father is self-existent and an evolving being (Valverde 2018a). But as he evolves, all his creation evolves. This is possible because he lives in all the living creatures of the world including us. Mechanical beings such as animals and vegetables that just follow the will of God, they evolve constantly thanks to the living God within them. God

keeps perfecting them all the time, so they can live in harmony with the universe. Our own bodies are part of this evolution process, God perfects our body continuously.

However, our own consciousness only evolves because our own willingness to evolve. God has created us as free will individuals that do not have to follow him as other creatures do blindly but only because of our own choice. However, he is always there in our evolution journey to guide us in this process.

Quantum physics is perhaps a possible answer to the scientific explanation of God's living within our consciousness. Quantum physics explains that the universe is made of quantum particles that are the cells of the universe and vibrating particles make different forms of energy and matter (Valverde 2016). Quantum physics explains that at the quantum level, particles that come from the same source are entangled regardless of space and time (Hu & Wu 2010). This means that two entangled particles can affect and communicate with each other instantaneously regardless of space between them. The Urantia book that is a revelation that claims to come from celestial beings, explains that souls are created from a source of light from a central universe where the universal mind resides (Urantia 1994). A scientific explanation to the Christian concept that God lives within is us could be explained with quantum entanglement, if our quantum particles are unified with the Universal mind, this Universal consciousness can be connected to us regardless of space and be able to understand our feelings and emotions through quantum particle vibrations (Valverde 2018a).

Being able to listen to God within us is part of the process of evolution as within this process that we can learn to understand the perfection of the universe and why we need to follow his perfect plan. To understand the wonders of the universe, all we must do is to be able to listen, meditation is the best technique to quiet our minds and be able to let the divine within us to express his wisdom to us that can help us as a guide for our evolution journey.

2. Gospel of Mary

The gospel of Maria Magdalene teaches us that there is no such thing as sin (King 2003). What we know as sin, is nothing more than error of choices that go against the universe perfection and harmony. Illness, suffering, poverty and many of the negative events that happen in our world are nothing more than the manifestation of the errors of our own choices, as the universe is perfect, wrong choices manifest as negative reactions of the universe to signal our consciousness that we are making the wrong decisions. So, in a way, God talks to us through negative manifestations of our wrong doings, so we can make the corrections and evolve as human beings. Integration with God is the goal of man (Valverde 2018b) but this integration must be by conviction that the

universal plan of perfection is the only way that we can follow to reach a perfect harmony that leads to eternal happiness of our human consciousness. Man must be convinced that God is perfection, that he is the teacher that can help us to reach our happiness and that if we go against this perfection, we are just attempting to break an existing harmonious universe that immediately retaliates with negative manifestations as the universal law of cause and effect explains (Humphreys 2005).

3. Death, Time and Space, Co-creation of the Universe

Death is part of your own evolution, without death, the world we live in would be static and things would never change. Without death, Tyrants in power would perpetuate themselves for eternity and you would be making the same mistakes all over again all the time. With death, evolution happens, those hungry of power die and let others to evolve the world for the better. Death is a consequence of our lack of perfection, when we reach a high level of perfection, we will stop death.

Creationist are ridiculed because they believe that God created the world in seven days, evolutionist would argue that evidence shows that it took millions of years to create the earth and universe (Lee et al. 2004). What evolutionist fail to realize, is that we are creatures of time and space that are only able to perceive time as a sequence of events in our brains (Valverde 2018c) and we firmly believe that time exists because we perceive it this way with our senses, however, time does not exist in the mind of God. The time it took for the creation of our world was just an instant in the eternity of the Universe. To expand our concept of the realities of the Universe, we need to understand the timeless nature of the reality outside of limited mortal mind, God consciousness is timeless and keeps evolving and modifying the Universe constantly, we are a product of his own power of creation but confined to an evolutionary system that is restricted by the time and space barriers.

In the world of God, there is only constant present. Since the absolute determines the existence of creation, in that same nano-instant, this (the whole creation) has already occurred, in its continuous present. A nano-instant of the absolute corresponds to all eternities in all dimensions. All the infinite and absolute possibilities of being, already occurred in the nano-instant of creation.

The absolute is the universal mind and in its thoughts gives life, creation and reality to absolutely everything that exists, existed, or possibly exists, whether this is measurable, or not, in all its infinite possibilities. As we evolve more in the scale of evolution, time and space will start to vanish and will be part of the eternal reality of the mind of God.

We live an evolving universe, nothing is static, everything changes for the better all the time. We

are part of this evolution process, but unlike many of the creations of God that just follow the evolving will of the father, we are responsible for our own evolution. Our father created us as free will creatures with an evolution plan, he wants us to evolve ourselves because he wants us to be part of his reality as self-consciousness individuals that are able to co create with him the universe we live in.

4. Conclusions

Physics has demonstrated that consciousness and matter are connected (Tegmark 2015), our living father as universal consciousness can create matter with his own thoughts. It is our own destiny to be able to create universes also with our minds. As children of our father, he wants to be able to share and expand the wonders of his creation, but for this to happen, we need to be capable of understanding his creation and its perfection by perfecting ourselves. We are students of the universe in this reality, our ultimate goal is to understand our true nature and evolve as human beings in order to reach high levels of existence. Evolution is the process that God has created for us to reach him, evolution and creationism is part of the same thing, only evolved beings will be able to create. Creationism is nothing more than the ultimate goal of evolution, our destiny as human beings is to be co-creators of this universe that we live in but it is only with our own evolution that we will be able to achieve this.
